New Procedure and Permit Requirements for Drone Operations at Geraldton Port

To ensure drone operations are managed safely, in accordance with relevant legislation and to ensure effective approvals of applications, MWPA have developed a new Procedure (2.12 Drone Operations) and Permit (F4.1r Drone Operations Permit). Procedure 2.12 outlines the minimum requirements project managers and contracted drone operators must meet for any drone operations occurring over Port land and waters. Permit F4.1r provides a mechanism for relevant MWPA departments to review documentation and provide commentary in an efficient manner prior to drone operations occurring.

Please ensure that you or any staff within your organisation who may be engaging drone operators for photography, videography, surveillance or any other contracted works are familiar with these requirements.

If you have any questions or concerns please contact the HSEQ Department or Wharf Supervisors for further information.
